- What is AirPrint?

AirPrint is Apple technology that enables printing from iOS or OS X devices without installing any applications or drivers. Users can enjoy the driverless printing from iOS and OS X products to KYOCERA MFPs and printers in the same network.

- Supported Print Settings

- Currently, the following print setting can be used with AirPrint. (as of April, 2013)

- Copies
- Duplex
- Page Range

- Supported Devices

Apple Devices

- AirPrint can be used with any Apple devices with iOS 4.2 and up, and OS X lion and up.

Supported KYOCERA MFPs/Printers

- AirPrint works with the following printers as of August 2013. We are planning to support other coming devices as well.

Project Name	Device Name	Firmware Release
6thPrinter	FS-2100DN	August , 2013
	FS-4100DN	
	FS-4200DN	
	FS-4300DN	

- REMARK:

- AirPrint is not supported with IB-51 and IB-50.
- AirPrint is not supported with any of the accounting features

- How is AirPrint different from KYOCERA Mobile Print?

- Basic Differences

We provide KYOCERA Mobile Print as a way to print from mobile devices. So how is AirPrint different from KYOCERA Mobile Print? One of the features of AirPrint is that users do not need to install additional application to their mobile devices and users can easily print from any application they are using. When using KYOCERA Mobile Print, users first need to open the application then reach to the document they want to print. AirPrint does not require these cumbersome steps. On the other hand, there are pros of using KYOCERA Mobile Print over AirPrint as well. KYOCERA Mobile Print can also be used for mobile scanning. In addition to this, KYOCERA Mobile Print can select the specific print settings where AirPrint only provides a few options for print settings.

Based on the comparison above, we could say that for those users who just want to print the page they are viewing without specific print setting, for example webpage printing, we could recommend them AirPrint. For those that would like to print many documents that need the specific print setting, white paper for example, we could recommend them KYOCERA Mobile Print. Please see the comparison chart below which summarizes the information above.

	AirPrint	KYOCERA Mobile Print
Basic Features	Print	Print and Scan
Device SW	None (OS native feature)	App
Supported Printers	6th Gen. Printers (as of April, 2013)	Most of existing Kyocera MFPs and printers
Supported Devices	iOS devices, OS X products	iOS and Android devices
Target print materials	Application that is AirPrint-enabled such as Photo, webpage, email and etc.	PDF, JPEG, TIFF, XPS, TXT, Document(iOS)
Print Settings	Number of Copies, Range, Duplex (as of April, 2013)	Covers most of print settings
Price	Free	Free

- Printing Office Documents

Although AirPrint is an easy way to print for mobile workers, we should be careful with its printing speed and printing quality for office documents. Printing office documents takes quite some time. The internal testing results<sup>1</sup> at KDC solutions planning department show that it takes about 6 minutes to print 12 pages of PowerPoint presentation, about 1 minute for 5 pages of Word document. (this is just a reference to give you an idea) Also, the layout does not come out as you expect—words and charts are sometimes overlapped, giving users difficulty to read. (due to iOS font limitation) However, please note that this is not the only case for our devices, it also happens with competitor's AirPrint. If you would like to print out documents, we recommend saving it as pdf first then print out.

---

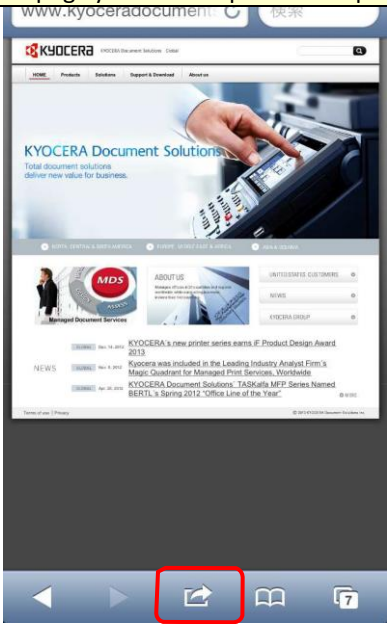

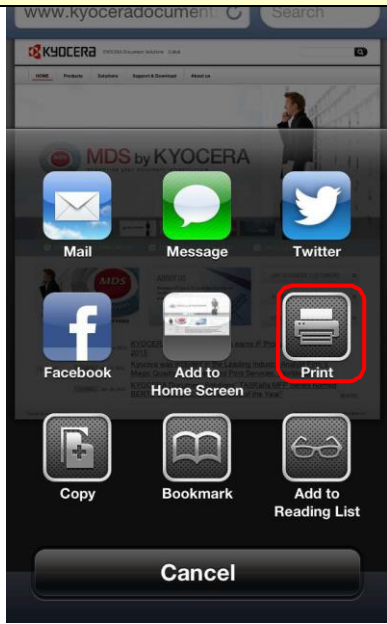

<sup>1</sup> Test Environment: ECOSYS FS-4300DN, iPhone5, iOS 6.0.1  
Word file: 2.4MB, PPT file: 3.8MB

- How to Use AirPrint

\* To use AirPrint, the mobile device should be connected to the same network as the KYOCERA AirPrint-enabled MFPs and Printers.

- How to Print

<p>1. View the page you want to print and tap</p> 	<p>2. Tap "Print" icon</p> 
<p>3. Choose the device and press print.</p> 	<p>4. Done!</p>

- How to Check Print Summary and Cancel Jobs

1. "Print Center" icon will appear when double clicked

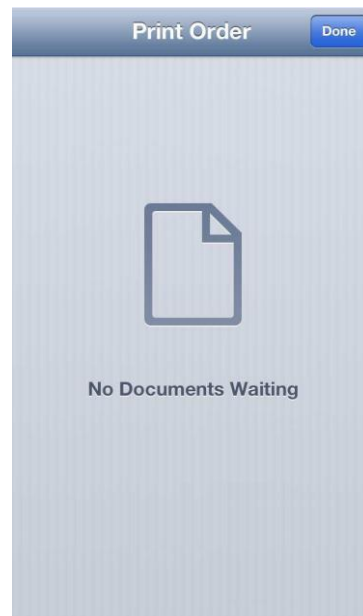

2. "Print Order" page is displayed. Tap the job to see the details.

3. Print Summary is displayed. When you want to cancel the job, tap "Cancel Printing".

4. Your job is canceled.
